a

Energy

Number-word frequency

Broad, overlapping components:
coarser readout

Deep, isolated wells:
exact readout

Evidence axis x

b

Entropy

$y_0=2$
$H=0.01$

$y_0=6$
$H=1.18$

$y_0=11$
$H=2.39$

Readout distribution
over integers

c

Predicted RT (s)

Basal latency t_0

Attractor time $\tau E[T]$

Fast, accurate

Slow, approximate

$\mathrm{RT} = t_0 + \tau E[T]$

Presented numerosity n
